SUMMARY

Python Backend Developer with 1+ year of experience building REST APIs and microservices using FastAPI, PostgreSQL, Redis, and SQLAlchemy. Skilled in AWS, Docker, Jenkins, GitHub Actions, JWT authentication, and RBAC. Currently learning AI Backend Engineering, including LLMs, Prompt Engineering, RAG, Vector Databases, LangChain, and AI Agents. Passionate about building scalable AI-powered applications.

EXPERIENCE

CoderView Technologies

Python Backend Developer (Junior)

March 2025 – March 2026

- Developed and maintained 5+ FastAPI-based microservices supporting Employee, Project, Timesheet, Expense, Client, and Project Code Management modules within a multi-tenant HRMS platform.
- Designed and implemented 20+ RESTful APIs using FastAPI, SQLAlchemy ORM, and PostgreSQL, enabling secure and scalable business operations across HRMS modules.
- Implemented JWT Authentication and RBAC across 20+ REST APIs and 5 microservices, securing access to employee, project, and timesheet management functionalities.
- Designed and optimized PostgreSQL database schemas for 5+ HRMS modules, improving data integrity and supporting efficient management of 100+ monthly business records.
- Integrated Redis caching and backend optimizations to improve performance of 20+ API endpoints and support efficient retrieval of frequently accessed data.
- Assisted in deploying applications on AWS EC2, managing file storage with AWS S3, and automating build and deployment workflows using Docker, Jenkins, GitHub Actions, and Git.
- Leveraged Generative AI tools including Gemini, Perplexity AI, and ChatGPT to accelerate development of 20+ REST APIs, streamline debugging, and improve technical documentation across 5 HRMS modules.

PROJECTS

AI-Powered Job Match Agent (In Progress)

- Developing an AI-powered job matching platform using FastAPI, PostgreSQL, Sentence Transformers, and Ollama to semantically match candidate profiles with job opportunities.
- Building an automated pipeline for job scraping, data cleaning, embedding generation, vector similarity search, LLM-based match analysis, and email notifications using APScheduler and Docker.

QR Code Generator

- Built a full-stack QR Code Generator using FastAPI and JavaScript, enabling dynamic QR code creation through a web-based interface.
- Integrated AWS S3 for secure image storage and containerized the application using Docker for consistent deployment and scalability.

SKILLS

Languages: Python, SQL, JavaScript

Backend: FastAPI, REST APIs, Microservices, Async Programming, JWT Authentication, RBAC

Databases: PostgreSQL, Redis, SQLAlchemy ORM

AI & GenAI: LLM Fundamentals, OpenAI API, Prompt Engineering, Embeddings, Vector Databases, RAG, LLM Evaluation, Function Calling/Tool Calling.

Cloud & DevOps: AWS EC2, AWS S3, API Gateway, Docker, CI/CD, Jenkins, GitHub Actions, Git

EDUCATION

SRM Institute of Science and Technology, Kattankulathur, TN
CSE w/s Cloud Computing

05/2024
CGPA: 8.7
